HPL Compact Laminate CustomArt®

**Program Description**

<b>EPD type</b>	Cradle to grave A1 to C4 + D as defined by EN 15804 [1]																		
<b>System boundary</b>	The system boundary with nature includes material and energy acquisition, processing, manufacture, transport, installation, use plus waste arising to end of life.																		
<b>Stages included</b>	Stages A1-3 A4-5, B1-4, C1 to C2 and C4 D1 to D3																		
<b>Stages excluded</b>	No stage was excluded but flows and results for B5-B7, C3 and D3 were all zero.																		
<b>Scope Depiction</b>	Figure 1 depicts all modules being declared including some with zero results. Any module not declared (MND) does not indicate a zero result.																		
<b>Model</b>	Actual																		
<b>Information</b>	Scenarios																		
<b>Stages</b>	Building Life Cycle Assessment																		
<b>Data Modules</b>	Product			Construct		Use					End-of-Life					Potential Supplementary			
<b>Unit Operations</b>	A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D1	D2	D3
<b>Cradle to Gate+ Options &amp; Grave</b>	Resources	Transport	Manufacture	Transport	Construct	Use	Maintain	Repair	Replace	Refurbish	Energy use	Water use	Demolish	Transport	Process Waste	Disposal	Reuse	Recovery	Recycling

Figure 1 EPD Life Cycle Modules Cradle to Grave

**Data Sources**

<b>Primary Data</b>	Data was collected from primary sources 2019 to 2022 including the manufacturer and suppliers' standards, locations, logistics, technology, market share, management system in accordance with EN ISO 14044:2006, 4.3.2, [4]. All are biochemical-physical allocated none are economically allocated.
<b>A1-A3 Stage inclusions</b>	Operations include all known raw material acquisition, refining, processing plus scrap or material reuse from prior systems; electricity generated from all sources with extraction, refining & transport plus secondary fuel energy and recovery processes. Also, transport to factory gate; manufacture of inputs, ancillary material, product, packaging, maintenance, replacement plus flows leaving at end-of-waste boundary and fate of all flows at end of life.
<b>Variability</b>	Significant differences of average LCIA results are declared.
<b>Chemicals of Concern</b>	Contains no substances in the European Chemicals Agency "Authorised or Candidate Lists of Substances of Very High Concern (SVHCs)".

**Data Quality**

Data cut-off & quality criteria complies with EN 15804 [1] The LCA used background data aged <10 years and quality parameters tabled below.

Background	Data Quality	Parameters and Uncertainty (U)			
<b>Correlation</b>	<b>Metric <math>\sigma</math></b>	U $\pm$ 0.01	U $\pm$ 0.05	U $\pm$ 0.10	U $\pm$ 0.20
<b>Reliability</b>	<b>Reporting</b>	Site Audit	Expert verify	Region	Sector

<b>Completion</b>	<b>Including</b>	>50%	>25%	>10%	>5%
	<b>Cut-off</b>	0.01%w/w	0.05%w/w	0.1%w/w	0.5%w/w
<b>Temporal</b>	<b>Data Age</b>	<3 years	$\leq$ 5 years	<7.5 years	<10 years
	<b>Duration</b>	>3 years	<3 years	<2 years	1 year
<b>Technology</b>	<b>Typology</b>	Actual	Comparable	In Class	Convention
<b>Geography</b>	<b>Focus</b>	Process	Line	Plant	Corporate
	<b>Range</b>	Continent	Nation	Plant	Line
	<b>Jurisdiction</b>	Representation is Global. Africa, North America, Europe, Pacific Rim			

HPL Compact Laminate CustomArt®

## Product Information

The Laminex Group is a leading manufacturer, distributor and marketer of decor board and surfaces.

<b>Brand Name &amp; Code</b>	Compact Laminate CustomArt® 1mm
<b>Range Names</b>	HPL Compact Laminate
<b>Factory warranty</b>	10 years use in interior residential and commercial buildings
<b>Manufacturer address</b>	Laminex Industries 332 Bay Rd., Cheltenham VIC 3192 Australia
<b>Site representation</b>	Australasia
<b>Geographical Area</b>	Use and disposal as for Australasia
<b>Application</b>	Benchtops & Cabinetry
<b>Function in Building</b>	Benchtops & Cabinetry
<b>Lifetime [5,6]</b>	20 years Reference Service Life (RSL) [ISO 15686]
<b>Declared unit</b>	Compact Laminate CustomArt® 1.35kg/m <sup>2</sup> in building interiors
<b>Functional unit</b>	20 years interior use of declared product/kg cradle to grave

## Product Components

This section summarises factory components, functions, source nation and % mass share. In product content listed below the % mass has a  $\pm 5\%$  range and a confidence interval that is 90% certain to contain true population means at any time. Listing such 90 $\pm 5\%$  certainty considers normal resource acquisition, supply chain, sedimentation, seasonal, manufacturing and product variation over this EPD's validity period. This also allows for intellectual property protection whilst ensuring fullest possible transparency.

Function	Component	Cradle	% w/w
<b>Filler</b>	Cellulose Fibre	Global	>64 <65
<b>Binder</b>	Phenol Formaldehyde	Germany	>21 <22
<b>Binder</b>	Melamine Formaldehyde	Germany	>2 <3
<b>Other Agents</b>	Plasticiser, fire retarder, catalyst, biocide, wetting & release agents	Global	each <1.0
<b>Packaging</b>			
<b>Crate</b>	Timber	Australia	>3.0 <4.0
<b>Pallet</b>	Timber	Australia	>1.5 <2.0

## System Analysis Scope and Boundaries

Stages A1 to 3 model actual operations. Stage A4 to C4 are model scenarios.

Typical scenarios are assumed to forecast unit operations as described in the next section.

Figure 2. shows included processes in a cradle to grave system boundary to end of life fates to unshown beyond the boundary reuse, recycling or landfill grave.

Figure 2. Product Process Flow Chart

HPL Compact Laminate CustomArt®

Scenarios for Modules/Functional Unit

Stages A1 to A3 model actual operations. This section defines scenarios A4 to D3. C3 Waste Treatment has no flows.

Phase	Operation	Type specified	Amount	Type specified	Amount
<b>A4 Transport</b>	Transport to Site	25t semi-trailer	60 km	85% Capacity	Full back load
	Long distance road	25t semi-trailer	600km	85% Capacity	Full back load
	Continental freight rail	Diesel train	600km	85% Capacity	Full back load
	Container shipping	Factory to CBD	1,200km	85% Capacity	Full back load
	Volume capacity (<1 ≥1)	Utilisation factor	1	Uncompressed	Un-nested
<b>A5 Construct</b>	Ancillaries	Adhesive	0.025kg	Edge trim	0.0001kg
	Packing	Cardboard	0.005kg	Polymer	0.00001kg
	Water & Energy	Town water	0.5litre	Grid power	0.0002 MJ
	Waste on site	Trims	0.05kg	All packaging	As shown kg
	Scrap collection & route	25t semi-trailer	60 km	to landfill	In LCA report
<b>B2 Maintain</b>	Emissions	Nil to air & water	0.0kg	All from landfill	In LCA report
	Maker's specification	URL Declared	Specified	Clean cycle	Weekly
	Ancillaries	Wipes	Negligible	Detergent	0.007kgpa
<b>B3 Repair</b>	Surface Washdown	Town water	1.95kgpa	Net to drain	1.90kgpa
	Typical practice	Damaged parts	0.05kg	Worn parts	Same 5%
	Maker's specification	As per website	Specified	Freight to site	As A5
<b>C1 Demolish</b>	Energy input & source	No excess	0.0MJpa	Packaging	As A5
	Typical practice	Remove worn	0.05kg	Collect Separate	0.05kg
<b>C2 Transport</b>	Collection process	In site waste	0.40kg	Separate to reuse	0.0kg
	Typical practice	25t truck road	50km	85% capacity	No back load
<b>C3 Waste Treatment</b>	Typical practice	No waste treated	0.0kg	Not for energy	0.0kg
<b>C4 Dispose</b>	Typical practice	Product specific	0.05kg	Collect separately	0.05kg
	Typical practice	Worn to landfill	5%	All emissions	mass share
	Recovery system	No recycling	0.0kg	Not for energy	0.0kg
<b>D1 Reuse</b>	Typical practice	Reuse	95%	Patch 5%	0.05kg
<b>D2 Recover</b>	Typical practice	Recover	100%	Cleaning	sweep
<b>D3 Recycle</b>	None typically	At 60 years	Nil	None	0%

## Environmental Impact Terminology

The United Nations reports only a few decades are left to resolve accelerating climate emergency and extinction crises. It is a call to action to all people to reverse the loss of climate and biodiversity security from human development in all activity [16]. Key environmental damages contributing to risks of ecological and community loss and collapse are tabled below with common names and remedies for each indicator.

<p><b>Climate change from anthropogenic infrared forced global warming</b></p>	<p>Greenhouse gases absorb infra-red radiation. This heat reduces thermal energy differentials, from equator to poles, forcing ocean current and wind circulation to blend and regulate climate. Weakly blended “lumpier” weather has more frequent, extreme heat wave, fire-storm, cyclone, rain-storm, flood and blizzard events. Accumulation of carbon dioxide, natural gas methane, nitrous oxides and volatile organic compounds from burning fossil fuels causes global warming. Forest and wilderness growth absorbing air-borne carbon in biomass can drawdown such accumulation. Urgent renewable energy reliance is vital in time to avoid imminent tipping points and the worsening “<i>climate emergency</i>”.</p>
<p><b>Ozone layer depletion</b></p>	<p>Stratospheric ozone loss weakens the planet’s solar shield so more shorter wavelength ultraviolet (UVB) light reaching earth damages plants and increases malignant melanoma and skin cancer in humans and animals. Chlorofluorocarbons, hydrochlorofluorocarbons (HCFC), hydrobromofluorocarbons, carbon tetrachloride, chlorobromomethane, methyl chloroform, methyl bromide and halon gas cause ozone layer loss. To repair the “<i>ozone hole</i>” reliance on ozone-safe refrigerants, aerosols and solvents is essential to avoid further its depletion and enable accumulation of naturally-formed ozone.</p>
<p><b>Acidification of air, land and waters</b></p>	<p>Acidification in the atmosphere reduces soil and waterway pH, impedes nitrogen fixation vital for plant growth and inhibits natural decomposition. It increases rates and incidence of fish kills, forest loss and deterioration of buildings and materials. Chief synthetic causes of “<i>acid rain</i>” are emissions of sulphur and nitrogen oxides, hydrochloric and hydrofluoric acids and ammonia from burning fossil fuels polluting precipitation of rain and snow world-wide.</p>
<p><b>Eutrophication of terrestrial, freshwater and marine life</b></p>	<p>Eutrophication from excessively high macronutrient levels added to natural waters promotes excessive plant growth that severely reduces oxygen, water and habitat security for aquatic and terrestrial organisms across related ecosystems. Chief synthetic cause of “<i>algal blooms</i>” is nitrogen (N, NO<sub>x</sub>, NH<sub>4</sub>) and phosphorus (P, PO<sub>4</sub><sup>3-</sup>) in rain run-off over-fertilised land catchments.</p>
<p><b>Photochemical ozone creation</b></p>	<p>Tropospheric photochemical ozone, called “<i>summer smog</i>” near ground level, is created from natural and synthetic compounds in UV sunlight. Low concentration smog damages vegetation and crops. High concentration smog is hazardous to human health. Chief synthetic causes are nitrogen oxides, carbon monoxide and volatile organic compounds (VOC) pollutants. Avoiding reliance on dirtiest coal fuel and volatile chemicals has reduced smog incidence in many areas globally.</p>
<p><b>Depletion of minerals, metals &amp; water</b></p>	<p>Abiotic depletion of finite mineral resources increases time, effort and money required to obtain more resources to the point of extinction of naturally viable reserves. This can limit access to available, valuable and scarce elements vital for human-life. The youth movement “<i>extinction rebellion</i>” calls on adults to secure climate, material reserves and biodiversity for current and future generations.</p>
<p><b>Depletion of fossil fuel reserves</b></p>	<p>Abiotic depletion of resources by consuming finite oil, natural gas, coal and yellowcake fossil fuel reserves leaves current and future generations suffering limited available, accessible, plentiful, essential valuable as well as scarce raw material, medicinal, chemical, feedstock and fuel stock. Approaching “<i>peak oil</i>” acknowledged fossil fuel reserves are finite and the need for decision-makers to act to avoid market instability, insecurity and or oil and gas wars.</p>

## Glossary of Impact Assessment Terms, Methods and Units

Acronyms, methods and units of impact potentials plus inventory inputs and outputs, are defined below

Impact Potentials	Acronym	Description of Methods	Units
Climate Change biogenic	GWP <sub>bio</sub>	GWP biogenic [7]	kg CO <sub>2eq</sub>
Climate Change luluc	GWP <sub>luluc</sub>	GWP land use & change [7]	kg CO <sub>2eq</sub>
Climate Change fossil	GWP <sub>ff</sub>	GWP fossil fuels [7]	kg CO <sub>2eq</sub>
Climate Change total	GWP <sub>t</sub>	Global Warming Potential [7]	kg CO <sub>2eq</sub>
Stratospheric Ozone Depletion	ODP	Stratospheric Ozone Loss [8]	kg CFC <sub>11eq</sub>
Photochemical Ozone Creation	POCP	Summer Smog [9]	kg NMOC <sub>eq</sub>
Acidification Potential	AP	Accumulated Exceedance [10]	mol H <sup>+</sup> <sub>eq</sub>
Eutrophication Freshwater	EP <sub>fresh</sub>	Excess nutrients freshwater [11]	kg P <sub>eq</sub>
Eutrophication Marine	EP <sub>marine</sub>	Excess marine nutrients [11]	kg N <sub>eq</sub>
Eutrophication Terrestrial	EP <sub>land</sub>	Excess Terrestrial nutrients [11]	mol N <sub>eq</sub>
Mineral & Metal Depletion	ADP <sub>min</sub>	Abiotic Depletion minerals [12]	kg Sb <sub>eq</sub>
Fossil Fuel Depletion	ADP <sub>ff</sub>	Abiotic Depletion fossil fuel [13]	MJ <sub>ncv</sub>
Water Depletion	WDP	Water Deprivation Scarcity [14,15]	m <sup>3</sup> <sub>WDP eq</sub>
Fresh Water Net	FW	Lake, river, well & town water	m <sup>3</sup>
Secondary Material	SM	Post-consumer recycled (PCR)	kg
Secondary Renewable Fuel	RSF	PCR biomass burnt	MJ <sub>ncv</sub>
Primary Energy Renewable Material	PERM	Biomass retained material	MJ <sub>ncv</sub>
Primary Energy Renewable Not Feedstock	PERE	biomass fuels burnt	MJ <sub>ncv</sub>
Primary Energy Renewable Total	PERT	Biomass burnt + retained	MJ <sub>ncv</sub>
Secondary Non-renewable Fuel	NRSF	PCR fossil-fuels burnt	MJ <sub>ncv</sub>
Primary Energy Non-renewable Material	PENRM	Fossil feedstock retained	MJ <sub>ncv</sub>
Primary Energy Non-renewable Not Feedstock	PENRE	fossil-fuel used or burnt	MJ <sub>ncv</sub>
Primary Energy Non-renewable Total	PENRT	Fossil feedstock & fuel use	MJ <sub>ncv</sub>
Hazardous Waste Disposed	HWD	Reprocessed to contain risks	kg
Non-hazardous Waste Disposed	NHWD	Municipal landfill facility waste	kg
Radioactive Waste Disposed	RWD	Mostly ex nuclear power stations	kg
Components For Reuse	CRU	Product scrap for reuse as is	kg
Material For Recycling	MFR	Factory scrap to remanufacture	kg
Material For Energy Recovery	MER	Factory scrap use as fuel	kg
Exported Energy Electrical	EEE	Uncommon for building products	MJ <sub>ncv</sub>
Exported Energy Thermal	EET	Uncommon for building products	MJ <sub>ncv</sub>

## Results Module D: Beyond System Boundaries

Table 4 has results for benefit and loads in D1 reuse, D3 recycling and D2 recovery.

**Table 4 D1 to D3 Impact & Inventory Results/Functional Unit**

Result	D1	D2	D3
Climate Change biogenic	-0.43	-1.8E-05	-1.3E-03
Climate Change luluc	-1.5E-02	1.8E-09	2.8E-03
Climate Change fossil	-2.8	2.5E-04	0.47
Climate Change total	-2.4	2.3E-04	0.40
Stratospheric Ozone Depletion	-3.4E-08	5.9E-13	9.1E-09
Photochemical Ozone Creation	-1.3E-02	1.0E-06	2.1E-03
Acidification Potential	-5.3E-03	4.4E-07	9.1E-04
Eutrophication Freshwater	-9.9E-06	1.2E-10	1.9E-06
Eutrophication Marine	-1.2E-03	7.7E-08	2.1E-04
Eutrophication Terrestrial	-1.1E-02	5.2E-07	1.9E-03
Mineral and Metal Depletion	-7.2E-04	5.8E-08	1.2E-04
Fossil Depletion	-1.6	1.5E-04	0.26
Water Scarcity Depletion	-2.5E-02	1.8E-05	4.4E-03
Net Fresh Water Use	-0.16	1.1E-04	2.7E-02
Secondary Material	-7.4E-03	0	2.7E-03
Secondary Renewable Fuel	-8.0	1.7E-04	1.8E-03
Primary Renewable Material	-1.7	2.7E-04	0.20
Primary Energy Renewable Not Feedstock	-6.7E-02	3.0E-05	4.3E-03
Primary Energy Renewable Total	-10.0	4.7E-04	0.21
Secondary Non-renewable Fuel	-8.0E-02	7.7E-06	1.5E-03
Primary Energy Non-renewable Material	-26	2.4E-03	1.9
Primary Non-renewable Energy Not Feedstock	-6.0	3.2E-04	0.14
Primary Energy Non-renewable Total	-32	2.7E-03	2.0
Hazardous Waste Disposed	-1.0E-03	1.9E-07	1.2E-04
Non-hazardous Waste Disposed	-6.1E-02	2.0E-05	4.1E-02
Radioactive Waste Disposed	-6.0E-16	4.9E-21	1.1E-16
Components For Reuse	0	0	0
Material For Recycling	-4.9E-02	1.5E-05	6.0E-03
Material For Energy Recovery	-8.3E-05	6.5E-09	2.1E-05
Exported Energy Electrical	0	0	0
Exported Energy Thermal	0	0	0

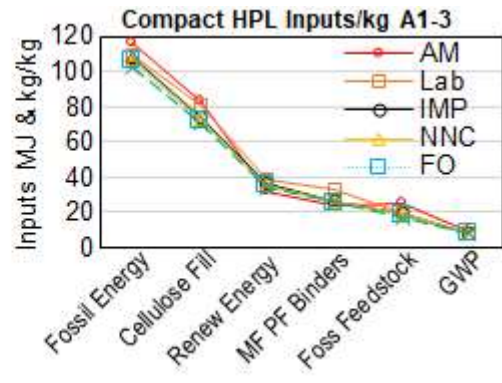

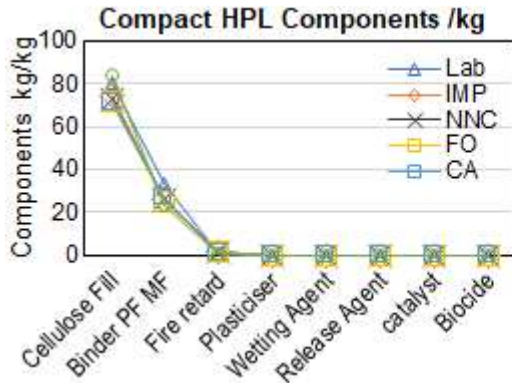

HPL Compact Laminate CustomArt®

**Interpretation Cradle to Gate A1 to A3**

The first interpretation section discusses Compact High Pressure Laminate results cradle to gate A1 to A3. Their names are Formica Velour (FO), Natural Nuance Chalk (NNC), Absolute Matte (AM), Chemical Resistant (Lab), CustomArt® (CA) and Natural Nuance Chalk Impressions (IMP)

Figure 3 charts their component mass kg/kg product A1-3. Figure 4 charts energy and feedstock input (MJ), versus filler, binder and greenhouse emissions (GWP) (kg)/kg product A1-3.

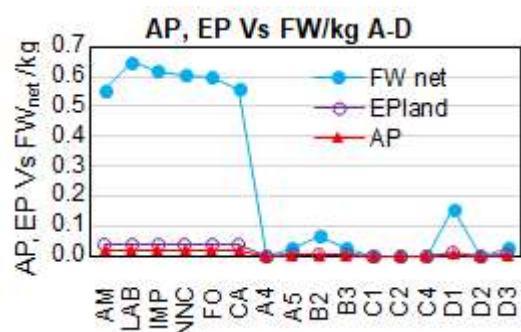

**Figure 3 Material Component Share kg/kg      Figure 4 Input Share (MJ & kg) Vs CO<sub>2e</sub> kg/kg**

Figure 3 shows cellulose filler and binders of Phenol or Melamine Formaldehyde (PF or MF) were the main components with others having very low mass share. Figure 4 shows reliance on fossil energy then renewable energy use then fossil feedstock compared to reliance on cellulose fill and formaldehyde binders versus low GWP. Renewable cellulose feedstock fill and renewable energy use reduced GWP.

**Interpretation Cradle to Grave and Beyond the System Boundary A1 to D3**

The next section discusses product results cradle to fate A1 to C4 and to D3 beyond the system boundary/kg Functional Unit.

Figure 5 charts fossil and renewable energy use and fossil feedstock use versus GWP. Figure 6 charts Freshwater use (FW<sub>net</sub>) Vs Acidification (AP) and Terrestrial Eutrophication (EP<sub>land</sub>).

**Figure 5 GWP vs Energy & Feedstock A-D/kg      Figure 6 FW Vs AP, EP & A-D/kg**

Figure 5 shows low GWP overall. It shows flows with minor credits in energy reuse beyond 20-years. Chart 6 shows Acidification and EP peak with cleaning in D1 reuse beyond 20-years.
